## Findings

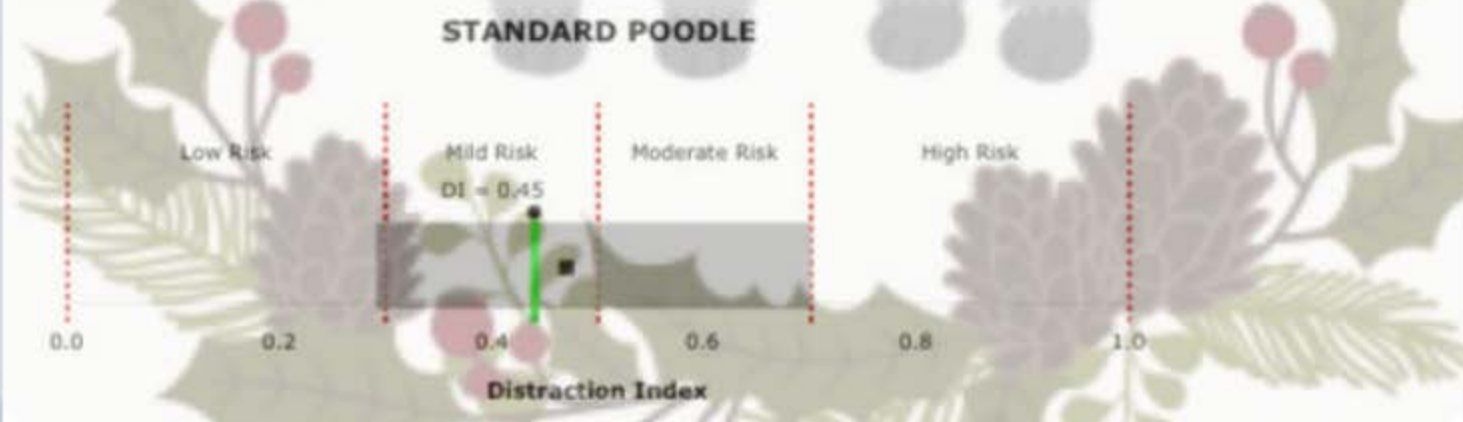

Distraction Index (DI): Right DI = 0.41, Left DI = 0.45. Osteoarthritis (OA): No radiographic evidence of OA for either hip. Cavitation/ Other Findings: No cavitation present.

## Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.45.

OA Risk Category: The DI is between 0.41 and 0.45. This patient is at mild risk for hip OA.

Distraction Index Chart:

**BREED STATISTICS:** This interpretation is based on a cross-section of 4044 canine patients of the STANDARD POODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.29 - 0.70) for the breed. The breed average DI is 0.47 (solid square). The patient DI is the solid circle (0.45).

**SUMMARY:** The degree of laxity (DI = 0.45) falls within the 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. No radiographic evidence of OA for either hip.
